New comments for application NY/2025/0030/ENV

New comments have been received for application NY/2025/0030/ENV from Mr Michael Salt.

Comments:

I strongly object to this proposal to carry out a 'proppant squeeze' due to the risks it creates for water, soil and air contamination. It will also create a risk of earth tremors in the area. There will be a massive detrimental impact of over 1000 HGV movements to the site. Europa Oil are exploiting a loophole in the current legislation to carry out what is fracking by any other name. It is clear from other similar operations, that if allowed to go ahead, their proposal will cause noise pollution, light pollution and noxious emissions which is no doubt why Europa do not want an Environmental Impact Assessment. You must not allow this application to go ahead.
