New comments for application NY/2025/0030/ENV

New comments have been received for application NY/2025/0030/ENV from Mr Aydin Onac.

Comments:

I STRONGLY object to this devastating proposal. 'Proppant squeeze' is just a euphemism for FRACKING. We don't need this gas in the UK. Europa will wreck and pollute the N. Yorks coast, the air around it, the water sources and the ground with toxic fumes and waste products. HGVs will cause damage to roads and danger to communities. I do not believe there will be any benefit for local jobs as fracking tends to import its own workers. Let's see this new government put actions behind its words and enforce its ban on fracking. We should be able to trust our politicians to think about the health implications, the environment and the mess they would leave for generations of our children. Please STOP this unacceptable proposal.
