Planning Application NY/2025/0030/ENV

How on earth is this being considered, especially when the current government is pushing for net zero by 2030?

We don't have the road structure to accommodate huge trucks, full of chemicals. Scarborough's roads are narrow and very busy, especially in the summer months. We are over an hour away from any dual carriage ways. These vehicles will be slow moving, cause tail backs and people will take risks to overtake.

The proposed site is in an area of outstanding natural beauty, the local area depends on tourism. This site will damage the environment, scare away wildlife and put off visitors. The chemicals used to pump into the rock will pose a serious risk to the water table, ground water and could leech into our drinking water. There is also a proven risk of tremors as seen in Blackpool and other sites.

If this is allowed to go ahead I am happy to risk my liberty by protesting at the site and NYCC offices, as I put my children's future, health and wellbeing before profits.
