Subject: Burniston Drilling for gas
Date: 11 March 2025 23:19:55

I would like to complain about the plans Europa have put forward
Application #NY/2025/0030/ENV.

Case Officer: Amy Taylor

Apart from the obvious fact that there are houses within metres of the site there will be
chemical pollution

light pollution with flares burning

Dust pollution

Drilling noises

Toxic Smells and fumes due to the gas flaring = damaging to climate change.

Over 1000 HGV vehicles passing through the narrow roads in the villages of

Scalby, Burniston and Cloughton.

The site is within close proximity of the cliffs which are already in a delicate condition
with the Cleveland Way having been diverted in the past few years due to parts of the
pathway falling down the cliff face at Hayburn Wyke area.

There is possibility of earth tremors

Many people on holiday hike along this cliff route to access Ravenscar and the beautiful
surrounding villages before they reach Whitby. The area is a Heritage coastline and very
close to National Park.

Tourism will be affected.

The many deer, foxes, badgers, birds and other wildlife around this area would be severely
affected.

Please help us to protect our countryside and preserve the environment.

If they found gas it wouldn't benefit us in the UK as it is going to be sold elsewhere.

This is what a Europa member told us when they came to try to convince us to accept what
they wanted to do

Yours sincerely

Mrs Elaine Cheyne

(age 77) and proud I managed to send an email.
