My wife and I are residents living in Scalby, Scarborough

We have just been made aware that Europa Oil and Gas have submitted plans for drilling, side stepping the fracking ban by a using a process called "proppant squeeze".

My wife and I are against this style of operation and register our concern forthwith.

To my understanding this procedure is just a watered down version of fracking and will cause considerable concern to our local community. Possible damage to properties, property value loss and difficulty in selling, lack of infrastructure to accommodate heavy transport and contributing to Fossil Fuels and climate change.

Are the North Yorks government just ignoring the obvious and the voters wishes?

The Labour manifesto stated Net Zero this is heading in the opposite direction and our grand children will reap the results.
