---

Dear Amy,

I would like to object to the above reference planning application. For the sake of our natural environment, our children's future, the planet's future and all our health, I don't believe that any further oil and gas exploration and exploitation with the aims for managing the climate crisis. This not only affects our locality but also the world population. It's time we took responsibility to show our compassion, our altruism and our plain common sense.

May I just add that I fully back the Frack free Coastal communities campaign, with their stated objections due to pollution, industrial development, damage to tourism, critical point climate change and risk of earth tremor, as well as well catalogued evidence elsewhere of interference with water supplies.

In my opinion there is a much more positive future in developing renewables. Let's not go backwards.

Sincerely  
Adrienne Silcock
