---

New comments have been received for application NY/2025/0030/ENV from Mrs Elizabeth Burnham.

Comments:

This is the same process as Fracking, which has already been deemed harmful. The name of the process does not mitigate the harm.

The wildlife in this area is far richer than in other parts of England it is an SSSI. Especially birds, it would be devastating for migrating birds that need the rest after a long flight, across miles of sea. They need peace and time to feed before their onward journey .

The cliffs in that area are used as nest sites for endangered birds, and tremors which WILL be caused by the process may cause cliff fall.

This area relies on tourism. It is beautiful. A rig, no matter how small will result in people holidaying elsewhere, local businesses will feel that decline in revenue thus causing entrepreneurs to relocate and further resulting in lack of visitor facilities.

The government have pledged to use more renewable energy, by the time this is up and running UK gas usage will be minimal. Making g this unethical and a total waste of funding.
