Subject: New comments for application NY/2025/0030/ENV
Date: 15 March 2025 20:02:15

New comments have been received for application NY/2025/0030/ENV from Mrs Stella Hodgson.

Comments:

I am against this proposal as it would be detrimental to the environment.

1. I am strongly of the opinion that renewable energy should be prioritised to avoid continuing to increase CO2 emissions. Future generations will suffer for this generation turning a blind eye to the impact.
2. This is an area where a main source of income is from the tourism sector. This proposal would negatively impact our economy should the exploration lead to full scale extraction of gas.
3. It is not appropriate to have this operation so close to a residential area. I cannot understand how this proposal is even being considered!
4. If passed, this would lead to pollution from gas flaring and toxic substances could enter the water courses in the area. There would be an increase in industrial traffic in an area where the main routes are ill equipped to cope with the existing level of traffic to and from the area.

I trust that leaders and decision makers at the Council will listen to the views of local residents and respected environmentalists and will turn their attention to the development of other more ecologically friendly sources of energy.
