**Categories:**

New comments have been received for application NY/2025/0030/ENV from Mr Chris Hick.

**Comments:**

Strongly object, proppant Squeeze is basically fracking on a smaller more localised scale which still involves injecting fluid and proppant into rock formations. This can cause tremors, Guardrilla had a site in Blackpool which caused tremors upto 2.9 magnitude, with over 120 recorded, one lasting nearly 100 hours. Residents should not have to endure 24/7 noise and light pollution. Reduction of air quality burning flares, with upto 18 HGV Lorry's per day along with Site Staff's Vehicles. Environmental / Wildlife impacts including possible water contamination. This site could turn into a large full scale, permanent fracking operation with no intention of demobilisation the Site after the initial set up and 17 week proppant Squeeze operation.
