We object very strongly to this proposal.

Our concerns are as follows

1. Traffic problems. This is a busy road especially with tourism in spring/summer. We already experience significant problems with large lorries trying to negotiate into and out of our carpark when delivering goods . As we have a small site lorries often wait on the roadside until a suitable time to reverse in, cars overtaking lorries can cause dangerous situations. I dread to think of the potential dangers to road users, of having many additional lorries arriving at that site every day. The pollution from the lorries as well as from the drilling.

2. Noise and pollution. How awful it could be for local residents as well as ourselves working outdoors 7 days per week, in what should be a lovely environment/nature tending to plants when potentially there will be loud noise all day, pollution, dust , lorries, toxic smell. We will be exposed to this all day every day.

3. Mental health. Many people, especially those suffering from mental health, love to visit a plant nursery. We have had and still do have many people who visit regularly, including those with physical and learning disabilities who enjoy and benefit from visiting a plant nursery and spending time around plants. We know from personal experience (mental health)how therapeutic this environment SHOULD and must continue to be.

We have children's groups visit and outings from other groups.

4.

5. Renewable energy is the future and if this method of extraction is deemed necessary, it should not be in a residential area like this. Many children(and families) go to school/town walking or cycling on the old railway line adjacent to our nursery. The pollution could cause considerable problems for those with asthma . Potential water pollution also a worry.

6. This is the heritage coast. We have an abundance of beauty, wildlife, deer, birds in this area. We rely on tourism very much in this area and the negative impact of this drilling will be huge on local people, businesses, tourists,and of course the environment.

7. THIS MUST NOT GO AHEAD AT ANY COST. WILDLIFE, LOCAL PEOPLE AND ENVIRONMENT FIRST, NOT PROFITS FOR BIG BUSINESS.
