Subject: Gas drilling planning application Burniston area North Yorkshire
Date: 21 March 2025 19:37:34

This application must be rejected. The International Energy Agency has been clear that in order to remain within 1.5oC of warming there should be no new fossil fuel development. We are already likely to exceed this with damaging consequences for our planet. This project will produce significant carbon dioxide and the more potent GHG, methane emissions. Scarborough and Whitby Labour MP Alison Hume and David Skaith, Mayor of York and North Yorkshire, have already opposed the plans, the planning authority must do the same. Granting permission that produces additional emissions is both reckless and not in the public interest. The future is renewables not fossil fuels. Please refuse the application.
