Subject: Objection to Europa planning application NY/2025/0030/ENV
Date: 21 March 2025 21:21:17

I wish to object to the application NY/2025/0030/ENV, regarding the "proppant squeeze" gas field at Burniston proposed by Europa Oil and Gas. It feels honestly ridiculous to even attempt to explain the reasons for this objection, since anyone who isn't already fully aware of them has surely moved beyond ignorance into that special realm where the only justification for one's views is the contents of the envelope that has found its way into a back pocket. Put simply, all new fossil fuel developments represent a short-sightedness of such gross magnitude that the phrase "sticking one's head in the sand" falls rather short of the mark.

If you truly are unaware of the facts, I would suggest reading the [summary of the IPCC's 2023 report](#), although if you've managed to remain ignorant into the year 2025 it would probably be better for everyone if you just retire from any post where you have to exercise decision-making power.

pona tawa sina,

jan Tasita
