**Subject:** New comments for application NY/2025/0030/ENV

New comments have been received for application NY/2025/0030/ENV from Mr Theo Parker.

Comments:

Reasons to object are numerous, so in brief: air pollution, water pollution, disruption of national park environment, needless risk of tremors, light pollution, and most critically: the UK should not, now or ever, approve a single fracking application. We should not be attempting to expand our production of fossil fuels in the slightest. The UK is missing its climate targets, and will continue to do so. Climate change is at a critical level. As one of the world's richest countries the example we set on climate change absolutely matters. Every town on the north east coast will be destroyed by rising sea levels within our lifetimes if we don't reverse course on CO2 production. Approving this project comes at a direct cost to local residents alive today.
