Subject: New comments for application NY/2025/0030/ENV

New comments have been received for application NY/2025/0030/ENV from Mr Simon Croft.

Comments:

The proposed speculative fracking will cause considerable environmental damage in the short term if unsuccessful, and considerable long-term environmental damage if it proves economically viable. The sheer scale of the proposal is totally unsuited to a largely unspoiled area of natural beauty, and I am among a large number of people who would undoubtedly not close to visit this area again if it is spoiled by industrial exploitation. Above all though, this experimental technology seeks to exploit the very fossil fuel we as a nation - and planet - are seeking to consign to history.
