---

New comments have been received for application NY/2025/0030/ENV from Mr Michael Miller.

Comments:

I strongly oppose this project. It will cause disruption to the local community and potentially contaminate ground water resources. More importantly, economic damage is being inflicted on us all by increasing global warming affecting the climate and causing more frequent and severe weather effects. the main cause of this is from burning fossil fuels. We have no need for more oil or gas as there are already sufficient proven world reserves. There is also the risk of methane leakage from fracking. Building a wind or solar farm would be much more helpful.
