I wish to register my OBJECTION to the application by EO & G to drill for gas in Burniston near Scarborough.

In the UK we have had the argument against fracking on environmental grounds again and again, and I can't believe we are having it all over again.

This is a heritage coastal location, and there is the potential for damage to cliffs, subsidence, etc.

There is potential for damage to wildlife & biodiversity. There will be noise pollution, air pollution, and potential groundwater pollution.

There are many other reasons to object, not least that the Climate Change Committee has repeatedly stated that there should be no new fossil fuel developments if the Government is going to reach its Net Zero target.

Kind regards
