Hello North Yorkshire Planning Control,

I would like to send in my objection to the planned Fracking Site Development at Burniston.

My name is Jacob Rawlinson, [REDACTED]

I studied Geography as an undergraduate and focussed my reading around the consequences for humans if we fail to curb our greenhouse emissions.

In brief, the result will be, we as a human race transgress the ecological boundaries of:

1. Ocean acidification,
2. Climate change
3. Biodiversity loss

This will lead to a collapse of civilization as we know it. It is quite conceivable that my children will live to see this and quite possibly die in the process. Maybe you have children/grandchildren a similar age as mine?

Jobs can be created in other ways. Other cleaner means of power can be created to power our vehicles and our homes. Once those ecological boundaries have been surpassed, our children/grandchildren will have to live/die with the consequences.

By saying no to this development, you would be able to say to your children/grandchildren that you tried and you used your power to make the difference you could to help make our planet a healthy and liveable place for them. I implore you, to put your children/grandchildren and my children, [REDACTED], in the front of your mind when you make your decision upon granting permission for this new fracking site in Burniston.

Kind Regards

Jacob Rawlinson
