Subject: New comments for application NY/2025/0030/ENV

Categories: ■

New comments have been received for application NY/2025/0030/ENV from Mr michael allan.

Comments:

Working people of Scarborough have the lowest average salaries of anywhere in the UK.

However we do have a beautiful place that millions want to visit. This allows the town to function - just.

To do anything that affects people visiting this town would be madness.

No doubt the chimney(s) and flaring would be seen from the Marine Drive. In addition, to take gas out of the ground without causing pollution and harm to the local environment is pure folly.

We cannot allow this to happen. I am not a 'NIMBY' - this area is everyone's back yard who visits here.

There is no tangible benefit to the town - just a huge amount of disruption to those unfortunate to live close to this.

And as I have stated - anyone relying on tourism to pay their bills.

As one visitor (from Rotherham) said to me - 'I come to Scarborough to get away from chimneys and industry'.

And for what - to produce gas that will go on sale on the international markets that the UK has to pay for. Brilliant - there isn't even a win - despite what we may get told.

I am born and bred in this town. Please stop this - for Scarborough's sake.
